

PRD – Term Loan Closure Awareness Module

Section 1 – Product Overview

An e-learning module designed to help bank employees across FIS MBP client organizations understand how a term loan closure is triggered, processed, and reflected across loan accounts, borrower profiles, and system records within the FIS Modern Banking Platform – upon 100% repayment of outstanding dues by the borrower.

Section 2 – Problem Statement

As FIS MBP is a newly launched core banking platform, banking clients lack historical familiarity with the platform and how the system behaves when a term loan is fully repaid and closed. Without this awareness, the loan servicing team struggles to navigate post-closure system states, leading to confusion around account status, outstanding balances, and borrower profile updates—resulting in errors and influx of support queries post go-live.

Section 3 – Goals and Success Metrics

Goal	Metric
Bank employees understands the delinquency workflow in FIS MBP	Target 20% increase in completion rate of e-learning modules designed for MBP
Reduce support queries related to delinquency workflow	Target 20-30% reduction in L1 delinquency tickets
Faster platform adoption and for post-disbursement workflows	Reduce go-live time for collection teams

Section 4 – User Persona

Persona 1 – Loan Servicing Officer

- Works at an FIS MBP client bank—e.g., Fifth Third Bank, BMO, Amex, SMBC, etc.
- Responsible for managing loan accounts post-disbursement through closure
- New to FIS MBP—needs to understand how closure looks and behaves in the system
- Needs to accurately interpret system states after full repayment

Persona 2 – Branch Manager

- Oversees loan servicing team at client bank
- Needs visibility into how closed accounts appear in the system
- Responsible for ensuring team handles post-closure queries accurately

Section 5 – User Stories

US001 – Closure Trigger Awareness as a loan servicing officer, I want to understand how the system processes a full loan payoff so that I can accurately identify and navigate a closed loan account in FIS MBP.

Acceptance Criteria:

- Module shows the loan account in active status with the outstanding amount before payoff
- Module demonstrates full payoff transaction being processed
- Module shows loan account status changing to closed post payoff
- Module shows outstanding principal and interest updating to zero

Section 6 – Module Flow

- Scene 1 – Preclosure State (Loan Status (Active), Outstanding Principal, Outstanding Interest, Tenure, Next EMI Due)
- Scene 2 – Full Payoff Transaction (Full payment recorded against the loan account)
- Scene 3 – System Status Changes (Loan Status (Closed), Outstanding Principal (0), Outstanding Interest (0), Repayment Schedule (Completed), Future EMIs (Cancelled)
- Scene 4 – Final State Summary (Closure Date recorded, closed status reflected across all records, distinction shown (closed vs settlement)

Section 7 – Scope

In Scope

- Term Loan closure scenario—100% dues paid by borrower
- Pre-closure & Post-closure status change
- Final summary
- Distinction between closure and settlement

Out of Scope

- Loan settlement – One-time settlement (OTS)/partial payment acceptance
- NOC generation
- Collection scenario
- Collateral release — Secured loans
- Self-employed borrower-specific closures

Section 8 – Product Applicability

Product	Type	Applicable
Personal Loan	Term Loan – Unsecured	Yes
Salaried Loan	Term Loan – Unsecured	Yes
Home Loan	Term Loan – Secured	Yes
Loan Against Property	Term Loan – Secured	Yes
Personal Loan	Line of Credit – Unsecured	Yes

Key Differences – Term Loan vs LOC Closure

- Term Loan Closure – fixed outstanding amount full repaid, account closed permanently
- LOC Closure—credit limit utilization reduced to zero, revolving facility credit closed or suspended based on bank policy

Section 9 – Module Delivery Format

eLearning simulation module – screen recording of live FIS MBP product using SME-provided dummy account with active loan status. Script developed collaboratively between Product Owner and Lending SME. Development is executed by the eLearning Dev team with script-audio synchronization. Output delivered via FIS internal LMS in SCORM-compliant format.

Section 10 – Dependencies

Dependency	Owner
Dummy account setup & Script sign-off	Lending SME
SCORM module Development & audio generation and synchronization	Developer
Testing	QA
LMS publishing	LMS Administrator

Section 11 — Timeline

Sprint Activity	Stage (Sprint 1)
Script drafting and SME review	Week 1
Screen recording on live product	Week 1
Dev synchronization — script and audio	Week 2
QA review and accuracy check	Week 2
LMS publishing and release	Week 3

Section 12 — Risks

Risk	Mitigation
SME unavailability for script sign-off	Buffer time built into sprint planning
Product UI changes before recording	Align with product team on UI freeze
Audio-script sync errors	QA review before LMS publishing
