

PRD – Term Loan Delinquency Awareness Module

Section 1 – Product Overview

An e-learning module designed to help bank employees across FIS MBP client organizations understand how term loan delinquency is represented, triggered, and reflected across borrower profiles, loan accounts, and system records within the FIS Modern Banking Platform.

Section 2 – Problem Statement

As FIS MBP is a newly launched core banking platform, banking clients lack historical familiarity with the platform and how the system behaves when a loan account becomes delinquent. Without this awareness, the loan servicing team struggles to navigate across the platform confidently during delinquency scenarios—leading to errors, delayed responses, dependencies on seniors, and an influx of support queries post-go-live, which in turn are chaotic for their customers.

Section 3 – Goals and Success Metrics

Goal	Metric
Bank employees understands the delinquency workflow in FIS MBP	Target 20% increase in completion rate of e-learning modules designed for MBP
Reduce support queries related to delinquency workflow	Target 20-30% reduction in L1 delinquency tickets
Faster platform adoption and for post-disbursement workflows	Reduce go-live time for collection teams

Section 4 – User Personas

Persona 1 – Collection Officer

- Works at an FIS MBP client bank—e.g., Fifth Third Bank, BMO, Amex, SMBC, etc.
- Responsible for monitoring and managing delinquent loan accounts
- New to FIS MBP—needs to understand how delinquency looks in the system

Persona 2 – Loan Servicing Officer

- Manages loan accounts post disbursement
- Needs to understand how account and borrower statuses change during delinquency
- Uses FIS MBP daily for loan servicing

Section 5 – User Stories

US001 – System Awareness as a collection officer, I want to understand how the system automatically flags a delinquent account so that I can quickly navigate to the right records when a borrower misses an EMI.

Acceptance Criteria:

- Module shows the auto flag and alert generation triggered by missed EMI
- Module shows borrower profile status change to Delinquent
- Module shows loan account status change to Overdue
- Module shows affected record and screen at 30+ DPD

US002 – Status Visibility as a loan servicing officer, I want to see how borrower and account statuses change during delinquency so that I can accurately read and interpret system records.

Acceptance Criteria:

- Module covers all status changed triggered by delinquency
- Final scene shows summary view of all affected records

Section 6 – Scope

In Scope:

- Term loan delinquency scenario—30+ DPD
- Auto flag and alert generation
- Borrower profile status change – Delinquent
- Loan account status change – Overdue
- Affected records and screen walkthrough
- Final summary scene – account and borrower status view

Out of Scope:

- Escalation flows – 60+ DPD, 90+ DPD
- Self-employed borrower delinquency
- NPA and recovery workflows

Section 7: Delivery Format

The output is an e-learning module—a screen recording of a live FIS MBP product with synchronized audio narration. Script developed collaboratively between Product Owner and Lending SME. Development and testing are executed by the eLearning dev and QA teams, respectively. Delivered via FIS internal LMS in SCORM-compliant format.

Section 8 — Dependencies

Dependency	Owner
Script sign-off	Lending SME
Live product access for screen recording	FIS MBP Product Team
Audio recording	Dev/Production Team
Script-audio synchronization	eLearning Dev Team
LMS publishing	LMS Administrator

Section 9 — Timeline

Sprint Activity	Stage (Sprint1)
Script drafting and SME review	Week 1
Screen recording on live product	Week 1
Dev synchronization — script and audio	Week 2
QA review and accuracy check	Week 2
LMS publishing and release	Week 3

Section 10 — Risks

Risk	Mitigation
SME unavailability for script sign-off	Buffer time built into sprint planning
Product UI changes before recording	Align with product team on UI freeze
Audio-script sync errors	QA review before LMS publishing
